Uncompressed HDTV on Tiled Display Wall

The advancement of networking technology allows transmission of uncompressed High Definition video over the Internet.

Osaka University and NTT have developed an uncompressed HDTV streaming system for SAGE, i-Visto player, that allows HD streaming video to be displayed in real-time on a SAGE-based TDW. The system can receive HDTV streams from the NTT i-Visto system.

In this booth, we demonstrate the display of i-Visto stream on TDW. The stream is sent from Tokyo to Portland via Osaka.
